

The Hotbox: Revolutionizing Food Delivery

Imagine a take-out meal that arrives perfectly hot, every time, without adding to environmental waste. The Hotbox is a revolutionary reusable packaging solution designed to make this a reality.

The Problem: Cold Food & Waste

Single-Use Packaging

Current take-out relies on single-use packaging, generating considerable non-recyclable, food-soiled waste.

Poor Insulation

Classic containers lack insulation, leading to cold food and the need for reheating, degrading quality.

New EU Regulations

Upcoming EU regulations will partially prohibit single-use packaging by 2030, requiring 10% reusable options.

Operational Complexity

centralised kitchen manage multiple container types, increasing costs and complicating operations.

Introducing the Hotbox Solution

The Hotbox is a reusable, deposit-based packaging system for conditioning and transporting food, guaranteeing sufficient temperature maintenance.

Hotbox Versatility: Two Configurations

Solid Food Configuration

The sole rests on the base, ideal for solid foods like pizza. A perforated cover can evacuate water vapor, preserving dough quality.

Liquid Food Configuration

The cloche rests on the base, perfect for non-solid/liquid foods such as soup, ensuring no spills and optimal temperature.

Unique Added Value

1

Exceptional Temperature Retention

Maintains temperature for over 30 minutes (10-25°C loss), exceeding typical delivery times.

2

Convenience

Eliminates reheating, saving time and energy. Serves as a plate for immediate consumption.

3

Sustainability

Eliminates single-use packaging. Fully recyclable (stainless steel & PPE) and easily washable.

4

Logistics Efficiency

No need for heated delivery boxes, as the Hotbox is self-sufficient for temperature.

Market Target: Centralized Kitchens

We are initially targeting centralized kitchens in France, with plans for European and global expansion.

France has an estimated 700 centralized kitchens, with Europe having around 6,000. Major operators include Elior, Sodexo, and Compass.

Business Model & Production

The Hotbox model involves selling reusable, deposit-based packaging units to centralized kitchens.

Inner Core Production

Embossed stainless steel parts (sole/cloche) require specific molds. Key sourcing locations are Italy, Turkey, and China.

Outer Casing Production

Injected plastics (PPE outer casing) also require specific molds. Producers of "Thermobox" are found in Germany, Italy, and China.

Cost & Pricing Strategy

Metric	Estimated Cost	Justification
Raw Material Cost	€11.40	Based on component material prices.
Cost of Goods Sold (COGS)	€22.00 - €27.00	Hypothetical estimate.
Production Gross Margin	48% - 58%	Target margin on COGS.
Estimated Production Cost	€21.50	Calculated for pricing.
Estimated Selling Price (50% Margin)	€43.00	Minimal price for B2B standard margin.
Estimated Selling Price (100% Margin)	€64.50	Reflects high value, patent exclusivity, and revolutionary solution.

Our pricing strategy aims to reflect the high value, patent exclusivity, and revolutionary nature of the Hotbox solution.

Competitive Advantage

Single-Use Packaging

Intended to disappear due to regulations.

Recyclable Packaging

Monocoque designs lack temperature retention.

Hotbox: Dual Solution

Addresses both reusability and guaranteed heat retention through innovative design.

The Hotbox's design creates multiple insulating air spaces, ensuring effective thermal insulation, a key differentiator.

Call to Action: Partner with Us

We are seeking strategic partners to help us globally deploy the Hotbox solution.

Adapted Financing

Needed to establish a global commercialization and distribution structure.

Strategic Partner

A "big name" partner to open doors to multinational corporations.

Legal Support

Highly dissuasive legal service to combat patent counterfeiting.

Our goal is to grant a patent license to this investor/structure, enabling worldwide deployment.

3-Year Strategic Forecast: Centralized Kitchen Segment

Targeting Institutional Catering for EU 2030 Reusable Packaging Compliance

YEAR 1: PILOT PHASE AND TECHNICAL DEMONSTRATION

Objective: Equip approx. 25 major centralized kitchens as proof-of-concept sites.

Sales Volume:
125,000 units

Serving 2,500 meals/day requires 5,000-7,500 rolling stock for rotation, transit, and cleaning.

Turnover:
€6,250,000 (at €50/unit)

Cost of Goods Sold (COGS):
€2,500,000

Hotbox manufacturing cost is 1/3 of traditional double-walled boxes due to no overmolding.

Gross Margin:
€3,750,000 (60%)

YEAR 2: REGIONAL ROLLOUT AND MAINTENANCE REVENUE

Objective: Expansion to 100 centralized kitchens.

Sales Volume:
400,000 units
(375k new for expansion, 25k renewal).

20% annual renewal for damaged/lost units in heavy logistics.

Turnover:
€20,000,000

Cost of Goods Sold (COGS):
€8,000,000

Stable production with stamped stainless steel and injected EPP.

Gross Margin:
€12,000,000 (60%)

YEAR 3: INSTITUTIONAL SCALE AND REGULATORY COMPLIANCE

Objective: Penetration of 400 centralized kitchens across Europe (EU 2030 mandate: 10% reusable).

Sales Volume:
1,600,000 units
(1.5M new, 100k renewal).

Turnover:
€80,000,000

Cost of Goods Sold (COGS):
€32,000,000

Gross Margin:
€48,000,000 (60%)
